Our 1.5mm-thick Aluminum frame

While other products are built with 1.1mm aluminum, we add comfort and stability -- with a 1.5mm structural frame that won't rust or rot, further extending the life of our chair.

Our super-tough, 4-Paint Layer, Protective Finish

First, a primer coat is applied to the aluminum frame to seal the surface and prevent oxidation. Then a layer of high quality automotive paint, then a custom wood-grain layer which is hand painted by an artist over the paint layer. Finally, a clear coat of automotive paint to protect and seal.

White on White

Durable PE Wicker

Beautiful and resilient, crafted of durable, hand-woven PE Rattan -- the finest available, UV and weather-resistant -- and will not lose elasticity even under heavy use.

Bake painting, also known as baked paint finishing, is an industrial process used to create a durable and high-quality finish on heat-resistant materials, most commonly metals.

The Durability of Bake Painting produces a finish that is resistant to chipping, scratching, and corrosion, making it ideal for items that will experience frequent use or exposure to harsh environments. The baking process ensures an even, smooth finish that is free of imperfections, drips, or uneven textures, giving the product a polished, professional appearance and providing excellent resistance to fading even when exposed to sunlight or other environmental factors.

Blue on White

Bake painting creates a tough surface that resists scratches, chips, and other forms of damage, preserving the product's appearance over time.
